1. About this catalog

This catalog describes the services offered by Demo IT Solutions Ltd. It is written for two audiences: customers who want to understand what we can help with, and our own sales and presales teams, who use it to map a customer's request to the right services.

Each service area includes an overview, the signals that suggest a customer needs it, the individual services with their deliverables, typical customers, the discovery questions we ask, and related areas. Every service has a code (for example **SEC-04**) so it can be referenced in proposals, tickets and tools.

The catalog deliberately contains no prices and no specific product models. Pricing depends on scope, quantities and the vendor platform chosen, and is provided in a separate quotation after discovery.

> **Note:** Demo IT Solutions Ltd is a fictional company. This document was created as sample reference data for a product demonstration and does not describe any real organisation.

2. Who we are

Demo IT Solutions Ltd is an IT solutions provider serving small, medium and enterprise organisations. We design, supply, implement and support technology across six service areas, so a customer can work with one partner from first conversation to ongoing support.

What we stand for

- **Discovery before design.** We understand the business problem before recommending technology.
- **Vendor-neutral advice.** We work with several technology vendors and recommend what fits the customer's needs and budget.
- **Phased delivery.** Large needs are broken into stages so customers can address the biggest risks first and spread cost.

- **Documented handover.** Every project ends with documentation and training so customers understand what they own.
- **Managed quality and security.** Our delivery processes follow documented quality and information security management practices.

Team

Account managers own the customer relationship. Presales engineers run discovery, design solutions and deliver proofs of concept. Delivery engineers implement projects. The support desk and managed services team handle ongoing operations.

3. Service areas at a glance

Use this table to find the right area quickly. Detailed descriptions follow in sections 4 to 9.

Service area	What it covers	Key services
Security SEC	Protecting people, devices, data and networks from cyber threats, and helping organisations respond quickly when something goes wrong.	Security Assessment and Gap Analysis; Next-Generation Firewall (NGFW); Endpoint Protection and EDR/XDR; Email Security and Anti-Phishing; and more
Network Infrastructure NET	Reliable, secure connectivity across offices, warehouses and branches, wired and wireless.	Network Assessment and Site Survey; LAN Design and Switching; Enterprise Wi-Fi; Internet Resilience and SD-WAN; and more
Cloud CLD	Moving, building and running workloads in public cloud and Microsoft 365 / Google Workspace, with cost and security under control.	Cloud Readiness Assessment; Productivity Suite Deployment; Cloud Migration; Cloud Landing Zone and Governance; and more
Data Centre and Backup DCB	Servers, storage, power and cooling for on-premises IT, plus backup and disaster recovery that is actually tested.	Infrastructure Assessment; Server and Virtualisation; Storage Solutions; Power Protection and UPS; and more
IT Procurement PRC	Sourcing, supplying and deploying hardware and software licences, with warranty and lifecycle management.	End-User Devices; Infrastructure Hardware; Software Licensing; Device Deployment and Imaging; and more
Business Software (ERP) ERP	Business applications for finance, invoicing, inventory, HR and customer management, implemented and integrated.	Business Process Review; Finance, Invoicing and Accounting; Inventory and Warehouse Management; CRM and Sales Management; and more

Most customer requests touch more than one area. For example, a phishing incident usually involves Security (containment, email protection, training) and often Data Centre and Backup (confirming data can be restored).

4. Security

SERVICE AREA CODE: SEC

Protecting people, devices, data and networks from cyber threats, and helping organisations respond quickly when something goes wrong.

Overview

Our Security practice helps organisations understand their risk, put the right controls in place and respond with confidence when an incident happens. We combine assessment, technology deployment, user awareness and ongoing monitoring, sized to the customer's risk and budget. Most engagements start with a short assessment so recommendations are based on evidence rather than assumptions.

When customers need this

- Staff receiving suspicious or spoofed emails, or someone has clicked a malicious link.
- Money lost to a fake payment request, invoice fraud or business email compromise.
- Devices running outdated antivirus, or no central view of which devices are protected.
- No firewall, or a consumer-grade router acting as the only perimeter.
- A customer, regulator or auditor is asking for evidence of security controls (for example NDPA, ISO 27001 or PCI DSS).
- Ransomware, data loss, account takeover or any other active incident.

Services

Code	Service	Description	Key deliverables
SEC-01	**Security Assessment and Gap Analysis**	Structured review of current controls, policies, users and devices against a recognised framework.	Risk register, prioritised remediation roadmap, executive summary
SEC-02	**Next-Generation Firewall (NGFW)**	Design, supply and configuration of perimeter firewalls with intrusion prevention, web filtering, application control and secure remote access VPN.	Firewall design, rule base, configuration backup, admin handover
SEC-03	**Endpoint Protection and EDR/XDR**	Centrally managed protection for laptops, desktops and servers, with detection and response across endpoints, email and network.	Deployed agents, policies, central console, coverage report
SEC-04	**Email Security and Anti-Phishing**	Filtering of spam, malware and impersonation attempts, plus SPF, DKIM and DMARC setup to reduce domain spoofing.	Mail filtering policy, DNS records, spoofing protection report
SEC-05	**Identity and Access Security**	Multi-factor authentication, single sign-on, privileged account controls and joiner/leaver processes.	MFA rollout, access policy, admin account review
SEC-06	**Security Awareness Training**	Short role-based training sessions and simulated phishing campaigns that measure and improve staff behaviour.	Training sessions, phishing simulation results, improvement tracking
SEC-07	**Incident Response**	Rapid support to contain an active incident, preserve evidence, restore services and prevent recurrence.	Containment actions, incident report, lessons learned
SEC-08	**Managed Security Monitoring**	Ongoing monitoring of security alerts with triage, escalation and monthly reporting.	Alert triage, monthly security report, quarterly review

Code	Service	Description	Key deliverables
SEC-09	**Compliance Readiness**	Support preparing for audits and data protection obligations, including policies, evidence and control mapping.	Policy set, control mapping, audit evidence pack

Typical customers

SMEs handling payments or customer data, financial services, healthcare, schools, logistics and any organisation that has recently experienced phishing or fraud.

Discovery questions

- How many users and devices need protecting, and where do they work from?
- What security tools are in place today (firewall, antivirus, email filtering, MFA)?
- Have there been any incidents in the last 12 months? What happened and what was lost?
- Are there compliance or contractual requirements to meet?
- Who is responsible for IT and security internally?
- Is there an active incident right now that needs immediate containment?

Related service areas

Network Infrastructure (firewall placement, segmentation), Data Centre and Backup (ransomware recovery), Cloud (cloud security posture).

5. Network Infrastructure

SERVICE AREA CODE: NET

Reliable, secure connectivity across offices, warehouses and branches, wired and wireless.

Overview

We design and build networks that stay up, perform well and are easy to manage. Our work covers the full path from the internet connection to the user's device: internet links and failover, routing, switching, Wi-Fi, structured cabling and inter-site connectivity. We start with a site survey so the design reflects the real building, users and applications.

When customers need this

- Internet or Wi-Fi keeps dropping, or is slow at busy times.
- Only one internet provider, so any outage stops work.
- Opening a new office, warehouse or branch.
- Untidy or undocumented cabling, unmanaged switches, or no one knows how the network is set up.
- Voice or video calls breaking up.
- Guests and staff share the same network.

Services

Code	Service	Description	Key deliverables
NET-01	**Network Assessment and Site Survey**	Review of current topology, performance, cabling and Wi-Fi coverage, including a wireless heat map.	Current-state diagram, issues list, recommended design
NET-02	**LAN Design and Switching**	Managed switching with VLAN segmentation for staff, guests, voice, CCTV and servers.	Network design, VLAN plan, configured switches
NET-03	**Enterprise Wi-Fi**	Centrally managed access points with coverage planning, guest access and roaming.	Coverage plan, installed access points, SSID and guest policy
NET-04	**Internet Resilience and SD-WAN**	Dual internet links with automatic failover and load balancing; SD-WAN for multi-site organisations.	Failover design, configured edge devices, failover test
NET-05	**Structured Cabling**	Copper and fibre cabling, patch panels, cabinets and labelling to recognised standards.	Installed cabling, test results, as-built documentation
NET-06	**Site-to-Site and Remote Connectivity**	Secure links between offices, warehouses and cloud environments.	VPN or private link design, configured tunnels
NET-07	**Unified Communications**	IP telephony, contact centre and collaboration systems integrated with the network.	Voice design, configured handsets and call flows
NET-08	**Network Monitoring and Management**	Monitoring of links and devices with alerting, capacity tracking and change management.	Monitoring dashboards, alerts, monthly availability report

Typical customers

Multi-site businesses, warehouses and logistics operators, hospitality, education, and organisations moving into new premises.

Discovery questions

- How many sites, users and devices? How large is each site?
- Which internet providers and link speeds are in use today?
- Where and when do problems happen (whole site, one area, certain times)?
- Which applications are most sensitive (voice, video, ERP, cloud apps)?
- Is there existing cabling and equipment we can reuse?
- Are any moves, expansions or new sites planned in the next 12 months?

Related service areas

Security (firewalls, segmentation), IT Procurement (hardware supply), Cloud (connectivity to cloud services).

6. Cloud

SERVICE AREA CODE: CLD

> Moving, building and running workloads in public cloud and Microsoft 365 / Google Workspace, with cost and security under control.

Overview

We help organisations decide what belongs in the cloud, move it safely and run it well. Our team covers productivity suites, cloud infrastructure, modern application platforms and cost optimisation. Every migration includes a readiness assessment, a tested rollback plan and a handover so the customer's team understands what they own.

When customers need this

- Old on-premises server nearing end of life, or no budget for new hardware.
- Staff need secure access to files and email from anywhere.
- Cloud bills are growing and nobody knows why.
- A new application or website needs scalable hosting.
- Interest in using AI on company data.

Services

Code	Service	Description	Key deliverables
CLD-01	**Cloud Readiness Assessment**	Inventory of applications and data, suitability for cloud, cost model and migration options.	Readiness report, target architecture, cost estimate
CLD-02	**Productivity Suite Deployment**	Setup and migration to Microsoft 365 or Google Workspace, including email, file sharing and collaboration.	Configured tenant, migrated mailboxes and files, user guides
CLD-03	**Cloud Migration**	Lift-and-shift or re-platforming of servers and applications to public cloud.	Migration plan, migrated workloads, cutover and rollback plan
CLD-04	**Cloud Landing Zone and Governance**	Secure multi-account foundation with identity, logging, guardrails and tagging.	Landing zone, policy guardrails, governance guide
CLD-05	**Serverless and Application Modernisation**	Rebuilding or extending applications with managed and serverless services.	Architecture design, deployed application, CI/CD pipeline
CLD-06	**Cloud Cost Optimisation**	Analysis of spend with rightsizing, scheduling and commitment recommendations.	Cost report, savings plan, implemented quick wins
CLD-07	**Generative AI Solutions**	Proofs of concept and production builds using managed AI model services, with data kept in the customer's own cloud account.	Use-case assessment, working proof of concept, production roadmap
CLD-08	**Managed Cloud Operations**	Ongoing monitoring, patching, backup checks and cost reporting for cloud environments.	Monitoring, monthly operations and cost report

Typical customers

Growing SMEs, distributed teams, software and digital businesses, and organisations replacing ageing servers.

Discovery questions

- Which applications and data would move, and how much data is there?
- Are there data residency or regulatory constraints on where data lives?
- What is the current hosting cost and hardware age?
- Which productivity tools are used today (email, file sharing)?
- Who will manage the environment after go-live?

Related service areas

Data Centre and Backup (hybrid and backup to cloud), Security (identity and posture), Business Software (cloud-hosted ERP).

7. Data Centre and Backup

SERVICE AREA CODE: DCB

Servers, storage, power and cooling for on-premises IT, plus backup and disaster recovery that is actually tested.

Overview

We design and maintain the physical foundation of IT: server rooms, servers, storage, virtualisation, power protection and cooling. We also make sure data can be recovered. Every backup design is built around two agreed targets: how much data the business can afford to lose (RPO) and how long it can afford to be down (RTO), and every design includes a documented restore test.

When customers need this

- Critical systems running on an old PC or a single ageing server.
- Backups exist but have never been tested, or nobody knows if they work.
- Frequent power cuts damaging equipment or causing downtime.
- Server room overheating or with no access control.
- Concern about ransomware wiping out data and backups together.

Services

Code	Service	Description	Key deliverables
DCB-01	**Infrastructure Assessment**	Review of servers, storage, power, cooling and backup against business recovery needs.	Asset list, risk findings, recommended design
DCB-02	**Server and Virtualisation**	Supply and setup of servers and hypervisors to consolidate workloads and improve resilience.	Configured hosts, virtual machines, admin handover
DCB-03	**Storage Solutions**	Network attached and shared storage sized for capacity, performance and growth.	Storage design, configured volumes, capacity plan
DCB-04	**Power Protection and UPS**	UPS systems, power distribution and generator integration to keep equipment running through outages.	Power design, installed UPS, runtime test
DCB-05	**Server Room and Small Data Centre Build**	Racks, cooling, environmental monitoring, physical access control and fire suppression.	Room design, installation, environmental monitoring
DCB-06	**Backup Solutions**	Automated backups following the 3-2-1 rule, including immutable or off-site copies to resist ransomware.	Backup policy, configured jobs, first restore test
DCB-07	**Disaster Recovery Planning and Testing**	Recovery plans, standby environments (on-premises or cloud) and scheduled recovery drills.	DR plan, RPO/RTO agreement, test report
DCB-08	**Hardware Maintenance and Support**	Preventive maintenance and break-fix support for servers, storage and power equipment.	Maintenance schedule, service reports

Typical customers

Organisations with on-premises systems, manufacturing and logistics sites, banks and healthcare providers, and any business with frequent power interruptions.

Discovery questions

- Which systems are critical, and what happens to the business if they stop?
- How much data could be lost without serious harm (RPO)? How long can systems be down (RTO)?
- What is backed up today, where to, and when was a restore last tested?
- How reliable is mains power, and is there a generator or UPS?
- What is the age and condition of the current servers?

Related service areas

Cloud (backup and DR to cloud), Security (ransomware protection), IT Procurement (hardware supply).

8. IT Procurement

SERVICE AREA CODE: PRC

Sourcing, supplying and deploying hardware and software licences, with warranty and lifecycle management.

Overview

We help customers buy the right technology at the right time, through authorised channels with genuine warranties. Beyond supply, we handle configuration, delivery, asset tagging and end-of-life replacement planning so equipment arrives ready to use.

When customers need this

- New staff joining and needing laptops, phones or desks set up.
- Licences expiring, or unclear which software licences the business owns.
- Equipment out of warranty or failing frequently.
- A project (network, data centre, security) requires hardware supply.
- Need for a single supplier with consolidated invoicing.

Services

Code	Service	Description	Key deliverables
PRC-01	**End-User Devices**	Laptops, desktops, monitors, printers and peripherals, pre-configured and ready for users.	Supplied and imaged devices, asset register
PRC-02	**Infrastructure Hardware**	Servers, storage, switches, access points, firewalls and UPS units for projects.	Supplied equipment, warranty registration
PRC-03	**Software Licensing**	Licence sourcing, renewals and true-ups for operating systems, productivity, security and business software.	Licence schedule, renewal calendar
PRC-04	**Device Deployment and Imaging**	Standard builds, enrolment in device management and delivery to staff or branches.	Standard image, enrolled devices, deployment report
PRC-05	**Asset and Lifecycle Management**	Tracking of assets, warranties and refresh cycles, plus secure disposal of retired equipment.	Asset register, refresh plan, disposal certificates

Typical customers

Any organisation buying IT equipment or licences, especially growing teams and project rollouts across multiple sites.

Discovery questions

- What items, quantities and specifications are needed, and by when?
- Is there a preferred brand, standard build or existing contract?
- Where should equipment be delivered, and does it need configuring first?
- Are there existing licences or warranties to renew or consolidate?
- What is the procurement process on the customer side (approvals, purchase orders)?

Related service areas

All service areas, as procurement supports most project deliveries.

9. Business Software (ERP)

SERVICE AREA CODE: ERP

Business applications for finance, invoicing, inventory, HR and customer management, implemented and integrated.

Overview

We implement business software that replaces spreadsheets and disconnected tools with a single source of truth. Our team handles requirements, configuration, data migration, integration and training, and we offer cloud and on-premises options depending on budget and connectivity.

When customers need this

- Invoicing, stock or accounts managed in spreadsheets or on paper.
- Different departments keep separate records that do not agree.
- Need for customer relationship management or a sales pipeline.
- HR and payroll handled manually.
- Growth makes current tools too slow or error-prone.

Services

Code	Service	Description	Key deliverables
ERP-01	**Business Process Review**	Mapping of current processes and requirements before software selection.	Process maps, requirements list, solution shortlist
ERP-02	**Finance, Invoicing and Accounting**	Implementation of accounting, invoicing, tax and reporting modules.	Configured modules, chart of accounts, opening balances
ERP-03	**Inventory and Warehouse Management**	Stock control, purchasing, warehouse locations and barcode scanning.	Configured inventory, item master, scanning workflow
ERP-04	**CRM and Sales Management**	Lead, opportunity and customer management with sales reporting.	Configured CRM, pipeline stages, dashboards
ERP-05	**HR and Payroll**	Employee records, leave, payroll and statutory deductions.	Configured HR module, payroll runs
ERP-06	**Data Migration and Integration**	Moving data from spreadsheets or legacy systems and connecting applications together.	Migrated data, reconciliation report, integrations
ERP-07	**Training and Application Support**	User training, admin training and ongoing functional support.	Training sessions, user guides, support plan

Typical customers

SMEs and mid-sized organisations in trading, distribution, logistics, manufacturing and professional services.

Discovery questions

- Which processes are most painful today (invoicing, stock, payroll, sales)?
- How many users, and which departments?
- What tools and data are used today, and how clean is the data?
- Is cloud-hosted software acceptable, given internet reliability?
- What reporting does management need?

Related service areas

Cloud (hosting), Network Infrastructure (reliable access), IT Procurement (licences and devices).

10. How we engage

Every engagement follows the same five stages. Small requests move through them in days; larger projects take weeks.

Stage	What happens	Output
1. Request	Customer contacts us by web form, email, phone or messaging. The request is logged and an urgency level is assigned.	Logged request, urgency, owner
2. Discovery	A presales engineer reviews the request, asks clarifying questions and, where needed, runs a call or site visit.	Discovery notes, confirmed requirements
3. Solution design	We design the solution, select service codes and vendor options, and agree success criteria.	Solution outline, scope, quotation
4. Proof of concept (optional)	For larger or uncertain projects we prove the approach on a small scale before full rollout.	Working proof of concept, results
5. Delivery and handover	Delivery engineers implement, test and document. The customer's team is trained.	Implemented solution, documentation, training

Engagement models

- **Fixed-scope project:** defined deliverables and timeline, quoted after discovery.
- **Phased programme:** a roadmap delivered in stages, starting with the highest-risk items.
- **Managed service:** ongoing monitoring and support under a service level agreement.
- **Time and materials:** flexible engineering support for changing or exploratory work.

11. Managed support and service levels

Managed services are available across all service areas. Response time is when an engineer starts working on the issue; resolution target applies to critical issues where a workaround or fix is reasonably possible.

Tier	Coverage	Response (critical)	Resolution target	Includes
Essential	Business hours (8:00-17:00, Mon-Fri)	4 business hours	Next business day	Remote helpdesk, monthly health check
Professional	Extended (7:00-20:00, Mon-Sat)	2 hours	8 hours	Remote and on-site support, monitoring, quarterly review
Premium	24 x 7	30 minutes (critical)	4 hours (critical)	Dedicated account engineer, proactive monitoring, monthly review

12. Request urgency guide

Every incoming request is given one urgency level so the right people respond in the right time. When in doubt, choose the higher level.

Urgency	Definition	Examples	Expected first response
High	Active incident, financial loss, data at risk, or business stopped.	Fraudulent transfer after phishing; ransomware; main site offline.	Same-day response; involve security or on-call engineer.
Medium	Recurring disruption or significant risk, but business is still operating.	Frequent internet outages; untested backups; old server failing.	Respond within 1 business day; schedule assessment.
Low	Planned improvement, new project or general enquiry.	Want invoicing software; planning new office next quarter.	Respond within 2 business days; book discovery call.

13. What is outside our scope

To set clear expectations, the following are not part of our standard offering. Where relevant, we can refer customers to trusted partners.

- Custom software development from scratch (beyond integrations and configuration).
- Website design, branding and digital marketing.
- Physical security such as guards, CCTV monitoring staff or building alarms (CCTV network connectivity is in scope).
- Electrical wiring of buildings beyond IT power distribution and UPS.
- Legal advice on regulatory compliance (we provide technical controls and evidence).
- Consumer or personal device repair.

> When a request includes something outside this catalog, it should be noted as **outside the current service list** and raised with the account manager, rather than quoted.

Appendix A: Request keyword guide

Customers describe problems in their own words. This guide links common phrases to the service area and the services most likely to apply. It is a starting point for discovery, not a final answer.

Customer says...	Service area	Likely services
phishing, strange emails, clicked a link, fake bank, spoofing, fraud, hacked, virus, ransomware	Security	SEC-03, SEC-04, SEC-06, SEC-07
firewall, VPN, remote access, MFA, passwords, audit, compliance, NDPA	Security	SEC-01, SEC-02, SEC-05, SEC-09
internet down, slow network, Wi-Fi, cabling, new office, branch, warehouse coverage	Network Infrastructure	NET-01 to NET-06
phones, calls dropping, video conferencing	Network Infrastructure	NET-07
email migration, Microsoft 365, Google Workspace, work from anywhere, file sharing	Cloud	CLD-02
move to cloud, hosting, cloud bill, AI, chatbot	Cloud	CLD-01, CLD-03, CLD-06, CLD-07
old server, PC under a desk, backup, restore, disaster recovery, power cuts, UPS	Data Centre and Backup	DCB-01, DCB-02, DCB-04, DCB-06, DCB-07
laptops, new staff, licences, renewals, hardware purchase	IT Procurement	PRC-01 to PRC-04
invoicing, accounting, stock, inventory, payroll, CRM, spreadsheets	Business Software (ERP)	ERP-01 to ERP-06

Worked example

> *"We are a 60-person logistics company with one office and a small warehouse. Our internet keeps going down, staff get strange emails and two people clicked something last month. Our server is an old PC under a desk and the backup has never been tested. We also want invoicing software. Budget is small."*

Need	Service area	Services	Priority
Possible compromise after clicked links; ongoing phishing	Security	SEC-07, SEC-04, SEC-06, SEC-03	High
Untested backup on an old PC acting as server	Data Centre and Backup	DCB-06, DCB-07, DCB-02 or CLD-03	High
Internet keeps going down	Network Infrastructure	NET-01, NET-04	Medium
Invoicing software	Business Software (ERP)	ERP-01, ERP-02	Low

Given the small budget, a phased approach fits: first confirm no ongoing compromise and get a tested backup, then stabilise the internet, then implement invoicing.

Appendix B: Glossary

Term	Meaning
3-2-1 backup	Three copies of data, on two types of media, with one copy off-site.
CRM	Customer Relationship Management: software for tracking customers, leads and sales.
DMARC, SPF, DKIM	Email authentication records that help stop others sending email pretending to be your domain.
EDR / XDR	Endpoint / Extended Detection and Response: tools that detect and respond to threats on devices, and across devices, email and network.
ERP	Enterprise Resource Planning: integrated software for finance, inventory, HR and operations.
Immutable backup	A backup copy that cannot be changed or deleted for a set period, protecting it from ransomware.
MFA	Multi-Factor Authentication: a second check, such as a code on a phone, in addition to a password.
NGFW	Next-Generation Firewall: a firewall that also inspects applications, blocks intrusions and filters web traffic.
RPO	Recovery Point Objective: the maximum amount of data, measured in time, the business can afford to lose.
RTO	Recovery Time Objective: the maximum time a system can be unavailable after an incident.
SD-WAN	Software-Defined Wide Area Network: centrally managed connectivity across multiple sites and internet links.
UPS	Uninterruptible Power Supply: battery backup that keeps equipment running during power cuts.
VLAN	Virtual LAN: a way of separating one physical network into isolated segments.
